INTRODUCTION

The Canadian Environmental Protection Act (CEPA) was proclaimed on June 30, 1988. While most of the Act's provisions were implemented immediately, the new substances notification and assessment provisions cannot be initiated until the Domestic and Non-domestic Substances Lists, called for by Section 25 of the Act, are in place.

The Domestic Substances List (DSL) will specify substances that were, between January 1, 1984 and December 31, 1986, (a) manufactured in or imported into Canada by any person in a quantity of not less than 100 kg in any one calendar year; or (b) in Canadian commerce or used for commercial manufacturing purposes in Canada. The DSL will define "existing" substances for the purposes of CEPA and will be the sole basis for determining whether a substance is "existing" or "new" to Canada. The Non-domestic Substances List (NDSL) will specify substances, other than those on the DSL, that were in world commerce, but not in Canada, and will be based on the U.S. Environmental Protection Agency's 1985 inventory compiled for the Toxic Substances Control Act (TSCA). Substances that are not on the DSL will require notification and assessment before they can be manufactured in or imported into Canada. Substances on the NDSL will, however, have less onerous notification requirements than other new substances. The notification packages required from importers and manufacturers will be prescribed in the New Substances Notification Regulations under CEPA, and will include physical, chemical and toxicological data on the substance.

Environment Canada is in the process of preparing the DSL. The approach to compiling this list is in accordance with the consensus recommendations of the Environmental Contaminants Act Amendments Consultative Committee*; a multipartite committee comprised of representatives of federal and provincial governments, industry, labour and environmental non-governmental organizations. Compilation is being arried out in two information collection phases followed by a corrections and review period. Phase I involved a national survey of some 200 major chemical manufacturers and importers. It commenced October 1, 1989 and concluded on March 31, 1989 Substances reported during this period, and judged by Environment Canada to be consistent with the eligibility criteria as specified in CEPA, were used to prepare a Core Domestic Substances List (Core DSL) which was released in August 1989.

In Phase II of DSL compilation, all other Canadian manufacturers and importers were asked to submit additional candidate substances for inclusion on

INTRODUCTION

La Loi canadienne sur la protection de l'environnement (LCPE) a été adoptée le 30 juin 1988. Même si la plupart de ses dispositions sont déjà en vigueur, celles concernant les préavis et l'évaluation des substances nouvelles seront sans effet tant que les Listes intérieure et extérieure des substances, que réclame l'article 25 de la Loi, ne seront pas établies.

Dans la Liste intérieure des substances (LIS) seront énumérées les substances qui ont été, entre le 1er janvier 1984 et le 31 décembre 1986, a) fabriquées ou importées au Canada, par une personne, en des quantités d'au moins 100 kg au cours d'une année civile; ou b) commercialisées ou utilisées à des fins de fabrication commerciale au Canada. La LIS définira ce qu'est une substance existante au sens de la Loi et sera le seul document qui permettra de déterminer si une substance est "existante" ou "nouvelle" au Canada. Dans la Liste extérieure des substances (LES) seront énumérées les substances qui ne se trouveront pas sur la LIS et qui étaient commercialisées ailleurs qu'au Canada. Cette liste sera fondée sur l'inventaire de 1985 de l'EPA, établi pour les besoins du "Toxic Substances Control Act (TSCA)". Les substances non énumérées sur la LIS devront faire l'objet d'un préavis et d'une évaluation avant leur fabrication ou leur importation au Canada. Cependant, par rapport aux substances nouvelles, celles de la LES seront soumises à des exigences de préavis moins nombreuses. La documentation requise des importateurs et fabricants sera indiquée dans les règlements de déclaration de substances nouvelles sous la LCPE et inclura des données physiques, chimiques et toxicologiques sur la substance.

Environnement Canada travaille présentement à dresser la LIS. La compilation de la Liste se conforme au consensus atteint au Comité consultatif sur les modifications à la Loi sur les contaminants de l'environnement*; comité multipartite constitué de représentants des gouvernements fédéral et provinciaux, de l'industrie, des syndicats et des organismes environnementaux non gouvernementaux. Les renseignements nécessaires seront recueillis en deux temps suivi d'une période de révision et correction. La Phase I consistait en un sondage national de quelque 200 grands fabricants et importateurs. Elle a débuté le 1er octobre 1988 et s'est terminée le 31 mars 1989. Les substances déclarées lors de cette période et qu'Environnement Canada estime être consistantes avec les critères d'admissibilité tels que spécifiés dans la LCPE, sont documentées dans la Liste intérieure de base (LIS de base) qui a été publiée au mois d'août 1989.

Pendant la Phase II, tous les autres fabricants et importateurs canadiens ont été invités à soumettre des substances candidates additionnelles afin qu'elles soient the list. Phase II began on April 1, 1989 and concluded January 15, 1990. Substances nominated in this second reporting phase have been evaluated and those consistent with the eligibility criteria have been added to those in the Core DSL. This expanded listing is included in this document and constitutes the Provisional Domestic Substances List (Provisional DSL).

A correction and review period will be the concluding step in building the DSL. It will afford Phase I and Phase II nominators an opportunity to indicate corrections, as well as allow for nominations of substances by firms that are neither importers nor manufacturers. The correction and review period will conclude on August 10, 1990, allowing approximately three months for the review of this listing. The final DSL is scheduled for publication in the Canada Gazette in early 1991.

Compilation of the Provisional Domestic Substances List

Substances nominated in Phase II have been evaluated by Environment Canada to determine consistency with the eligibility criteria specified in CEPA, as well as the completeness of complementary information (e.g. substance use, sites of manufacture, quantities) required as part of the reporting process. Some substances were rejected for the DSL as a consequence of errors, omissions or inconsistencies in the data.

In order to facilitate the use and interpretation of the Provisional DSL, the Chemical Abstracts Services Preferred (CA) Index Name; names provided by submitters and judged to be unambiguous in defining the identity of the substances; and names identified by Chemical Abstracts Services (CAS) as being uniquely descriptive of the substance (commonly referred to as CAS Synonyms) have been provided for all Chemical Abstracts Service Registry Numbers included in the listing. CA Index Names and CAS Synonyms have been provided to Environment Canada by Chemical Abstracts Service and are available only in English. Submitter substance names are in the language (English or French) used for nomination. Users of this document are cautioned that, while the final DSL will contain all Chemical Abstracts Registry Numbers appearing on the Provisional DSL, synonym names will not be included. Therefore, in any cross-referencing of the Provisional and final DSLs, CAS Registry Numbers and CA Index Names will be the keys.

Information on the availability of this printed version of the Provisional DSL can be obtained by contacting Environment Canada at the address or telephone number noted in the **Information and Assistance** section.

The Domestic Substances List, scheduled for publication in the Canada Gazette in early 1991, will supersede this publication.

incluses sur la Liste. La Phase II a débuté le 1er avril 1989 et s'est terminée le 15 janvier 1990. Les substances déclarées lors de cette période ont été évaluées et celles qui satisfont aux critères d'admissibilité ont été ajoutées à la LIS de base. Le résultat est documenté dans cette publication et forme la "Liste intérieure provisoire des substances" (LIS provisoire).

La période de correction et révision sera la dernière étape pour l'établissement de la LIS. Elle permettra aux participants des deux phases d'indiquer les corrections nécessaires et permettra aussi aux compagnies, qui ne fabriquent pas ou n'importent pas de substances, de faire des déclarations. Cette période se terminera le 10 août 1990, soit trois mois après la publication de la LIS provisoire. La LIS finale sera publiée dans la Gazette du Canada au début de l'année 1991.

Établissement de la Liste intérieure provisoire des substances

Les substances déclarées lors la Phase II ont été évaluées par Environnement Canada afin de déterminer si elles satisfont aux critères d'admissibilité, spécifiés dans la LCPE, et si l'information complémentaire requise dans le processus de déclaration est complète (par ex. utilisation de la substance, lieux de fabrication, quantités, etc...). Certaines substances ont été rejetées de la LIS suite à des erreurs, omissions ou inconsistances dans les données.

Afin de faciliter l'utilisation et l'interprétation de la LIS provisoire, les noms préférés (de l'index CA) de Chemical Abstracts Service, les noms soumis (ne prêtant pas à équivoque), et les noms que le Chemical Abstracts Service estime être descriptifs et uniques aux substances (dont on réfère souvent comme étant les synonymes de CAS) ont été fournis pour tous les numéros de registre de CAS de la Liste. Les noms de l'index CA et les synonymes de CAS ont été fournis à Environnement Canada par le Chemical Abstracts Service et sont disponibles seulement en anglais. Toutefois, les noms soumis seront listés d'après la langue (francais ou anglais) dans laquelle ils ont été déclarés. Les usagers de ce document sont avertis que, même si la LIS finale contiendra tous les numéros de registre de Chemical Abstracts Service qui apparaissent sur la LIS provisoire, les noms synonymes ne seront pas inclus. Ainsi, lors des renvois entre la LIS provisoire et la LIS finale, les numéros de registre de CAS et les noms préférés de CAS seront les clés.

L'information sur la disponibilité de cette version imprimée de la LIS provisoire peut être obtenue en communiquant avec Environnement Canada à l'adresse ou au numéro de téléphone indiqués dans la section **Information et assistance.**

La Liste intérieure des substances, dont la publication dans la Gazette du Canada est prévue pour le début de l'année 1991, remplacera cette publication.

Use of the Provisional Domestic Substances List

Two indices are provided to facilitate the use of this printed version of the Provisional DSL. Each index provides a different means of locating a substance which may be on the list.

Registry Number Index: A listing of Chemical Abstracts Service Registry Numbers in ascending numerical sequence followed by the associated CA Index Name. Each entry also provides the molecular formula when the substance is well defined.

A CAS Registry Number consists of up to nine digits which are separated into three groups by hyphens. The first group, starting from the left, has up to six digits; the second group has two digits; and the final group consists of a single check digit.

Certain CAS Registry Numbers which appear on the Provisional DSL are followed by an asterisk (*). The asterisk is used to identify substances of unknown or variable composition, complex reaction products, and biological materials; commonly referred to as UVCB substances. Substances designated by an asterisk have been assigned Registry Numbers by CAS to support the needs of government regulatory agencies and are not used by CAS Abstracting and Indexing Services. For some UVCB substances, a CA Index Name may not be sufficiently descriptive and a definition is required. A definition typically begins with a description of the process by which the substance is manufactured and ends with a specific or generic listing of the predominant chemical species of the composition. These substance definitions are included in this index and follow the CA Index Name.

The substance name is described according to CAS nomenclature. CA Index Names are derived according to a rigorous, comprehensive set of nomenclature rules to ensure a single, unique name for each substance.

The molecular formula is given when the structure of the substance is well defined. The element symbols in the molecular formula are arranged according to the Hill system; carbon-containing compounds C first, followed immediately by H (if present), then the remaining symbols alphabetically. For compounds that do not contain carbon, the order of symbols is strictly alphabetical.

Substance Name Index: An alphabetically ordered listing of substance names, including the CA Index Name, CAS Synonyms for each substance on the Provisional DSL and unambiguous substance names provided by submitters, in the language (English or French) used for nomination. CAS Synonyms include non-systematic names, trivial names and common names determined by CAS to be specific to a particular substance.

Utilisation de la Liste intérieure provisoire des substances

Deux index sont fournis pour faciliter l'utilisation de cette version imprimée de la LIS provisoire. Chaque index fournit une différente méthode pour localiser une substance qui peut se retrouver sur la Liste.

Index des numéros de registre: Une liste de numéros de registre de Chemical Abstracts Service, en séquence numérique ascendante suivie du nom préféré de CAS complémentaire. Chaque entrée fournit aussi la formule moléculaire lorsque la substance est bien définie.

Un numéro de registre de CAS peut comprendre jusqu'à neuf chiffres divisés en trois groupes séparés par des tirets. Le premier groupe, en commençant par la gauche, peut comprendre jusqu'à six chiffres, le deuxième groupe comprend deux chiffres et le dernier groupe comprend un seul chiffre de vérification.

Certains numéros de registre de CAS, qui apparaissent sur la LIS provisoire, sont suivis d'un astérisque (*). Cet astérisque est utilisé pour identifier les substances de composition inconnue ou variable, les produits de réaction complexe ou les matières biologiques (UVCB - unknown or variable composition, complex reaction products, or biological materials). Des numéros de registre de CAS ont été attribués aux substances désignées par un astérisque afin de supporter les besoins des organismes régulateurs gouvernementaux, mais ces numéros ne sont pas utilisés par les services de rédaction et d'indexation de CAS. Pour quelques substances UVCB, le nom préféré de CAS n'est pas suffisamment descriptif et requiert une définition. Une définition débute habituellement par une description du processus utilisé pour fabriquer la substance et se termine par une liste spécifique ou générique de l'espèce chimique prédominante de la composition. Ces définitions de substances sont incluses dans cet index et font suite au nom d'index de CA.

Le nom de la substance est décrit d'après la nomenclature de CAS. Les noms préférés de CAS sont dérivés à partir de règlements de nomenclature rigoureux et compréhensifs afin d'assurer qu'il y ait un nom unique pour chaque substance.

La formule moléculaire est indiquée lorsque la structure de la substance est bien définie. Les symboles des éléments, dans la formule moléculaire, sont écrits d'après le système de Hill; les composés contenant du carbone C en premier, suivi immédiatement par H (si présent) et ensuite par les autres symboles en ordre alphabétique. Pour les composés qui ne contiennent pas de carbone, l'ordre des symboles est automatiquement alphabétique.

Index des noms des substances: Une liste, en ordre alphabétique des noms des substances, inclut les noms préférés de CAS, les synonymes de CAS et les noms soumis (ne prêtant pas à équivoque) dans la langue dans laquelle ils ont été déclarés (anglais ou français). Les synonymes de CAS comprennent des noms non-systématiques, des sigles et des noms communs que CAS considère être particuliers à la substance.

A substance may be marketed commercially under a variety of names. The absence of a particular name in the Substance Name Index does not mean that the chemical substance is not included on the Provisional DSL; the substance may be identified in the index by a synonymous substance name. If the name of a substance cannot be found in the Substance Name Index, other reference material should be consulted before concluding the substance is not cited. If the CAS Registry Number is known, the Registry Number Index should be consulted directly.

Users of the Provisional DSL are cautioned that most trade names are not substance specific and, therefore, not suitable for DSL reporting purposes.

Deletions from the Core Domestic Substances List

A number of nominations received by Environment Canada in the initial phase of DSL building, and accepted for the Core DSL published in August 1989, have subsequently been determined to be invalid. In instances where this was the only valid nomination, the consequence has been deletion of the substance from the DSL. CAS Registry Numbers appearing on the Core DSL but not included in this listing are noted below:

25231-38-3
51243-61-9

Availability of the Provisional Domestic Substances List in other Formats

To further assist companies wishing to utilize the Provisional DSL, Environment Canada has arranged for its mounting on the on-line computer system of the Canadian Centre for Occupational Health and Safety (CCOHS). Using this system, a user may search the Provisional DSL on the basis of:

- CAS Registry Number
- Substance Name
- Molecular Formula

Subscribers to the CCOHS on-line network, CCINFOline will have access to this version of the Provisional DSL. Individuals requiring information on CCINFOline and access to it should contact:

CCINFO Services

Health and Safety

Une substance peut être commercialisée sous une variété de noms. L'absence d'un nom, en particulier dans l'index des noms des substances, ne signifie pas que la substance chimique n'est pas identifiée sur la LIS provisoire; la substance peut être identifiée dans l'index sous un nom synonyme. Si le nom de la substance ne peut pas être retrouvé dans l'index, d'autres documents référentiels devraient être consultés avant de conclure que la substance n'est pas incluse. L'index des numéros de registre de CAS devrait être directement consulté si le numéro est connu.

Les usagers de la LIS provisoire sont avisés que la plupart des noms commerciaux ne sont pas spécifiques à une substance, et ainsi, ne sont pas acceptables aux fins de déclaration pour la LIS.

Radiations de la LIS de base

Quelques déclarations, reçues par Environnement Canada lors de la première phase, ont été conditionnellement acceptées pour la LIS de base. Toutefois, suivant une évaluation plus approfondie, Environnement Canada a déterminé que certaines d'entre elles n'étaient pas valables. Subséquemment, lorsque les substances n'ont été déclarées qu'une seule fois, elles ont été radiées de la LIS. Les numéros de registre de CAS qui figuraient sur la LIS de base mais qui n'apparaissent pas sur la LIS provisoire sont:

8005-02-5
25038-59-9
25231-38-3
51243-61-9
56709-13-8
57035-94-6
96726-33-9

Autres formats disponibles pour la Liste intérieure provisoire des substances.

Dans le but d'assister les compagnies désirant utiliser la Liste provisoire, Environnement Canada a procédé à l'installation de la Liste provisoire dans le système informatisé du Centre canadien d'hygiène et de sécurité au travail (CCHST). Grâce à ce système, un usager peut faire une recherche à travers la Liste provisoire en se servant:

- du numéro de registre de CAS
- du nom de la substance
- de la formule moléculaire

Les abonnés du service INFO-Centre du réseau CCHST auront accès à cette version de la Liste provisoire. Les personnes intéressées à obtenir plus d'information sur la disponibilité de la ligne CCINFO devront communiquer avec:

Environment Canada is also making the Provisional DSL available in a computer readable version. The format is a standard 5 1/4" diskette (MS-DOS operating system, ASCII file) containing all CAS Registry Numbers on the Provisional List. Substance names are not included. This diskette format should be useful to those who have collated their data on a personal computer. The diskettes are available from Environment Canada, on request, by contacting the Domestic Substances List Project at the address or telephone noted under **Information and Assistance**.

Glass, oxide, chemicals

Synonym: Chemical substances manufactured in the production of inorganic glass

This category encompasses the various chemical substances manufactured in the production of inorganic glasses. For purposes of this category, "glass" is defined as an amorphous, inorganic, transparent, translucent or opaque material traditionally formed by fusion of sources of silica with a flux, such as an alkali-metal carbonate, boron oxide, etc. and a stabilizer, into a mass which is cooled to a rigid condition without crystallization in the case of transparent or liquid-phase separated glass or with controlled crystallization in the case of glass-ceramics. The category consists of the various chemical substances, other than by-products or impurities, which are formed during the production of various glasses and concurrently incorporated into a glass mixture. All glasses contain one or more of these substances, but few, if any, contain all of them. The elements listed below are principally present as components of oxide systems but some may also be present as halides or chalcogenides, in multiple oxidation states, or in more complex compounds. Trace amounts of other oxides or chemical compounds may be present. Oxides of the first seven elements listed* comprise more than 95 percent, by weight, of the glass produced.

Ceramic materials and wares, chemicals
Synonym: Chemical substances manufactured in the production of ceramics
This category encompasses the various chemical substances manufactured in the production of ceramics. For purposes of this category, a ceramic is defined as a crystalline or partially crystalline, inorganic, non-metallic, usually opaque substance consisting principally of combinations of inorganic oxides of aluminum, calcium, chromium, iron, magnesium, silicon, titanium, or zirconium which conventionally is formed first by fusion or sintering at very high temperatures, then by cooling, generally resulting in a rigid, brittle monophase or multiphase structure. (Those ceramics which are produced by heating inorganic glass, thereby changing its physical structure from amorphous to crystalline but not its chemical identity are not included in this definition.) This category consists of chemical substances other than by-products or impurities which are formed during the production of various ceramics and concurrently incorporated into a ceramic mixture. Its composition may contain any one or a combination of these substances. Trace amounts of oxides and other substances may be present. The following representative elements are principally present as oxides but may also be present as borides, carbides, chlorides, fluorides, nitrides, silicides, or sulfides in multiple oxidation states, or in more complex compounds.

Silica gel, pptd., cryst.-free
Synthetic amorphous silica (silicon dioxide) is produced by a wet process by reacting an aqueous alkali metal silicate solution and a mineral acid. An extensive hydrated silica structure, or "gel" is formed which is then dried. A precipitated silica is also produced in a "wet" process in a finely-divided, hydrated form by precipitation from aqueous alkali metal silicate solutions. This product contains no detectable crystalline silica.

INTRODUCTION

The Canadian Environmental Protection Act (CEPA) was proclaimed on June 30, 1988. While most of the Act's provisions were implemented immediately, the new substances notification and assessment provisions cannot be initiated until the Domestic and Non-domestic Substances Lists, called for by Section 25 of the Act, are in place.

The Domestic Substances List (DSL) will specify substances that were, between January 1, 1984 and December 31, 1986, (a) manufactured in or imported into Canada by any person in a quantity of not less than 100 kg in any one calendar year; or (b) in Canadian commerce or used for commercial manufacturing purposes in Canada. The DSL will define "existing" substances for the purposes of CEPA and will be the sole basis for determining whether a substance is "existing" or "new" to Canada. The Non-domestic Substances List (NDSL) will specify substances, other than those on the DSL, that were in world commerce, but not in Canada, and will be based on the U.S. Environmental Protection Agency's 1985 inventory compiled for the Toxic Substances Control Act (TSCA). Substances that are not on the DSL will require notification and assessment before they can be manufactured in or imported into Canada. Substances on the NDSL will, however, have less onerous notification requirements than other new substances. The notification packages required from importers and manufacturers will be prescribed in the New Substances Notification Regulations under CEPA, and will include physical, chemical and toxicological data on the substance.

Environment Canada is in the process of preparing the DSL. The approach to compiling this list is in accordance with the consensus recommendations of the Environmental Contaminants Act Amendments Consultative Committee*; a multipartite committee comprised of representatives of federal and provincial governments, industry, labour and environmental non-governmental organizations. Compilation is being arried out in two information collection phases followed by a corrections and review period. Phase I involved a national survey of some 200 major chemical manufacturers and importers. It commenced October 1, 1989 and concluded on March 31, 1989 Substances reported during this period, and judged by Environment Canada to be consistent with the eligibility criteria as specified in CEPA, were used to prepare a Core Domestic Substances List (Core DSL) which was released in August 1989.

In Phase II of DSL compilation, all other Canadian manufacturers and importers were asked to submit additional candidate substances for inclusion on

INTRODUCTION

La Loi canadienne sur la protection de l'environnement (LCPE) a été adoptée le 30 juin 1988. Même si la plupart de ses dispositions sont déjà en vigueur, celles concernant les préavis et l'évaluation des substances nouvelles seront sans effet tant que les Listes intérieure et extérieure des substances, que réclame l'article 25 de la Loi, ne seront pas établies.

Dans la Liste intérieure des substances (LIS) seront énumérées les substances qui ont été, entre le 1er janvier 1984 et le 31 décembre 1986, a) fabriquées ou importées au Canada, par une personne, en des quantités d'au moins 100 kg au cours d'une année civile; ou b) commercialisées ou utilisées à des fins de fabrication commerciale au Canada. La LIS définira ce qu'est une substance existante au sens de la Loi et sera le seul document qui permettra de déterminer si une substance est "existante" ou "nouvelle" au Canada. Dans la Liste extérieure des substances (LES) seront énumérées les substances qui ne se trouveront pas sur la LIS et qui étaient commercialisées ailleurs qu'au Canada. Cette liste sera fondée sur l'inventaire de 1985 de l'EPA, établi pour les besoins du "Toxic Substances Control Act (TSCA)". Les substances non énumérées sur la LIS devront faire l'objet d'un préavis et d'une évaluation avant leur fabrication ou leur importation au Canada. Cependant, par rapport aux substances nouvelles, celles de la LES seront soumises à des exigences de préavis moins nombreuses. La documentation requise des importateurs et fabricants sera indiquée dans les règlements de déclaration de substances nouvelles sous la LCPE et inclura des données physiques, chimiques et toxicologiques sur la substance.

Environnement Canada travaille présentement à dresser la LIS. La compilation de la Liste se conforme au consensus atteint au Comité consultatif sur les modifications à la Loi sur les contaminants de l'environnement*; comité multipartite constitué de représentants des gouvernements fédéral et provinciaux, de l'industrie, des syndicats et des organismes environnementaux non gouvernementaux. Les renseignements nécessaires seront recueillis en deux temps suivi d'une période de révision et correction. La Phase I consistait en un sondage national de quelque 200 grands fabricants et importateurs. Elle a débuté le 1er octobre 1988 et s'est terminée le 31 mars 1989. Les substances déclarées lors de cette période et qu'Environnement Canada estime être consistantes avec les critères d'admissibilité tels que spécifiés dans la LCPE, sont documentées dans la Liste intérieure de base (LIS de base) qui a été publiée au mois d'août 1989.

Pendant la Phase II, tous les autres fabricants et importateurs canadiens ont été invités à soumettre des substances candidates additionnelles afin qu'elles soient the list. Phase II began on April 1, 1989 and concluded January 15, 1990. Substances nominated in this second reporting phase have been evaluated and those consistent with the eligibility criteria have been added to those in the Core DSL. This expanded listing is included in this document and constitutes the Provisional Domestic Substances List (Provisional DSL).

A correction and review period will be the concluding step in building the DSL. It will afford Phase I and Phase II nominators an opportunity to indicate corrections, as well as allow for nominations of substances by firms that are neither importers nor manufacturers. The correction and review period will conclude on August 10, 1990, allowing approximately three months for the review of this listing. The final DSL is scheduled for publication in the Canada Gazette in early 1991.

Compilation of the Provisional Domestic Substances List

Substances nominated in Phase II have been evaluated by Environment Canada to determine consistency with the eligibility criteria specified in CEPA, as well as the completeness of complementary information (e.g. substance use, sites of manufacture, quantities) required as part of the reporting process. Some substances were rejected for the DSL as a consequence of errors, omissions or inconsistencies in the data.

In order to facilitate the use and interpretation of the Provisional DSL, the Chemical Abstracts Services Preferred (CA) Index Name; names provided by submitters and judged to be unambiguous in defining the identity of the substances; and names identified by Chemical Abstracts Services (CAS) as being uniquely descriptive of the substance (commonly referred to as CAS Synonyms) have been provided for all Chemical Abstracts Service Registry Numbers included in the listing. CA Index Names and CAS Synonyms have been provided to Environment Canada by Chemical Abstracts Service and are available only in English. Submitter substance names are in the language (English or French) used for nomination. Users of this document are cautioned that, while the final DSL will contain all Chemical Abstracts Registry Numbers appearing on the Provisional DSL, synonym names will not be included. Therefore, in any cross-referencing of the Provisional and final DSLs, CAS Registry Numbers and CA Index Names will be the keys.

Information on the availability of this printed version of the Provisional DSL can be obtained by contacting Environment Canada at the address or telephone number noted in the **Information and Assistance** section.

The Domestic Substances List, scheduled for publication in the Canada Gazette in early 1991, will supersede this publication.

incluses sur la Liste. La Phase II a débuté le 1er avril 1989 et s'est terminée le 15 janvier 1990. Les substances déclarées lors de cette période ont été évaluées et celles qui satisfont aux critères d'admissibilité ont été ajoutées à la LIS de base. Le résultat est documenté dans cette publication et forme la "Liste intérieure provisoire des substances" (LIS provisoire).

La période de correction et révision sera la dernière étape pour l'établissement de la LIS. Elle permettra aux participants des deux phases d'indiquer les corrections nécessaires et permettra aussi aux compagnies, qui ne fabriquent pas ou n'importent pas de substances, de faire des déclarations. Cette période se terminera le 10 août 1990, soit trois mois après la publication de la LIS provisoire. La LIS finale sera publiée dans la Gazette du Canada au début de l'année 1991.

Établissement de la Liste intérieure provisoire des substances

Les substances déclarées lors la Phase II ont été évaluées par Environnement Canada afin de déterminer si elles satisfont aux critères d'admissibilité, spécifiés dans la LCPE, et si l'information complémentaire requise dans le processus de déclaration est complète (par ex. utilisation de la substance, lieux de fabrication, quantités, etc...). Certaines substances ont été rejetées de la LIS suite à des erreurs, omissions ou inconsistances dans les données.

Afin de faciliter l'utilisation et l'interprétation de la LIS provisoire, les noms préférés (de l'index CA) de Chemical Abstracts Service, les noms soumis (ne prêtant pas à équivoque), et les noms que le Chemical Abstracts Service estime être descriptifs et uniques aux substances (dont on réfère souvent comme étant les synonymes de CAS) ont été fournis pour tous les numéros de registre de CAS de la Liste. Les noms de l'index CA et les synonymes de CAS ont été fournis à Environnement Canada par le Chemical Abstracts Service et sont disponibles seulement en anglais. Toutefois, les noms soumis seront listés d'après la langue (francais ou anglais) dans laquelle ils ont été déclarés. Les usagers de ce document sont avertis que, même si la LIS finale contiendra tous les numéros de registre de Chemical Abstracts Service qui apparaissent sur la LIS provisoire, les noms synonymes ne seront pas inclus. Ainsi, lors des renvois entre la LIS provisoire et la LIS finale, les numéros de registre de CAS et les noms préférés de CAS seront les clés.

L'information sur la disponibilité de cette version imprimée de la LIS provisoire peut être obtenue en communiquant avec Environnement Canada à l'adresse ou au numéro de téléphone indiqués dans la section **Information et assistance.**

La Liste intérieure des substances, dont la publication dans la Gazette du Canada est prévue pour le début de l'année 1991, remplacera cette publication.

Use of the Provisional Domestic Substances List

Two indices are provided to facilitate the use of this printed version of the Provisional DSL. Each index provides a different means of locating a substance which may be on the list.

Registry Number Index: A listing of Chemical Abstracts Service Registry Numbers in ascending numerical sequence followed by the associated CA Index Name. Each entry also provides the molecular formula when the substance is well defined.

A CAS Registry Number consists of up to nine digits which are separated into three groups by hyphens. The first group, starting from the left, has up to six digits; the second group has two digits; and the final group consists of a single check digit.

Certain CAS Registry Numbers which appear on the Provisional DSL are followed by an asterisk (*). The asterisk is used to identify substances of unknown or variable composition, complex reaction products, and biological materials; commonly referred to as UVCB substances. Substances designated by an asterisk have been assigned Registry Numbers by CAS to support the needs of government regulatory agencies and are not used by CAS Abstracting and Indexing Services. For some UVCB substances, a CA Index Name may not be sufficiently descriptive and a definition is required. A definition typically begins with a description of the process by which the substance is manufactured and ends with a specific or generic listing of the predominant chemical species of the composition. These substance definitions are included in this index and follow the CA Index Name.

The substance name is described according to CAS nomenclature. CA Index Names are derived according to a rigorous, comprehensive set of nomenclature rules to ensure a single, unique name for each substance.

The molecular formula is given when the structure of the substance is well defined. The element symbols in the molecular formula are arranged according to the Hill system; carbon-containing compounds C first, followed immediately by H (if present), then the remaining symbols alphabetically. For compounds that do not contain carbon, the order of symbols is strictly alphabetical.

Substance Name Index: An alphabetically ordered listing of substance names, including the CA Index Name, CAS Synonyms for each substance on the Provisional DSL and unambiguous substance names provided by submitters, in the language (English or French) used for nomination. CAS Synonyms include non-systematic names, trivial names and common names determined by CAS to be specific to a particular substance.

Utilisation de la Liste intérieure provisoire des substances

Deux index sont fournis pour faciliter l'utilisation de cette version imprimée de la LIS provisoire. Chaque index fournit une différente méthode pour localiser une substance qui peut se retrouver sur la Liste.

Index des numéros de registre: Une liste de numéros de registre de Chemical Abstracts Service, en séquence numérique ascendante suivie du nom préféré de CAS complémentaire. Chaque entrée fournit aussi la formule moléculaire lorsque la substance est bien définie.

Un numéro de registre de CAS peut comprendre jusqu'à neuf chiffres divisés en trois groupes séparés par des tirets. Le premier groupe, en commençant par la gauche, peut comprendre jusqu'à six chiffres, le deuxième groupe comprend deux chiffres et le dernier groupe comprend un seul chiffre de vérification.

Certains numéros de registre de CAS, qui apparaissent sur la LIS provisoire, sont suivis d'un astérisque (*). Cet astérisque est utilisé pour identifier les substances de composition inconnue ou variable, les produits de réaction complexe ou les matières biologiques (UVCB - unknown or variable composition, complex reaction products, or biological materials). Des numéros de registre de CAS ont été attribués aux substances désignées par un astérisque afin de supporter les besoins des organismes régulateurs gouvernementaux, mais ces numéros ne sont pas utilisés par les services de rédaction et d'indexation de CAS. Pour quelques substances UVCB, le nom préféré de CAS n'est pas suffisamment descriptif et requiert une définition. Une définition débute habituellement par une description du processus utilisé pour fabriquer la substance et se termine par une liste spécifique ou générique de l'espèce chimique prédominante de la composition. Ces définitions de substances sont incluses dans cet index et font suite au nom d'index de CA.

Le nom de la substance est décrit d'après la nomenclature de CAS. Les noms préférés de CAS sont dérivés à partir de règlements de nomenclature rigoureux et compréhensifs afin d'assurer qu'il y ait un nom unique pour chaque substance.

La formule moléculaire est indiquée lorsque la structure de la substance est bien définie. Les symboles des éléments, dans la formule moléculaire, sont écrits d'après le système de Hill; les composés contenant du carbone C en premier, suivi immédiatement par H (si présent) et ensuite par les autres symboles en ordre alphabétique. Pour les composés qui ne contiennent pas de carbone, l'ordre des symboles est automatiquement alphabétique.

Index des noms des substances: Une liste, en ordre alphabétique des noms des substances, inclut les noms préférés de CAS, les synonymes de CAS et les noms soumis (ne prêtant pas à équivoque) dans la langue dans laquelle ils ont été déclarés (anglais ou français). Les synonymes de CAS comprennent des noms non-systématiques, des sigles et des noms communs que CAS considère être particuliers à la substance.

A substance may be marketed commercially under a variety of names. The absence of a particular name in the Substance Name Index does not mean that the chemical substance is not included on the Provisional DSL; the substance may be identified in the index by a synonymous substance name. If the name of a substance cannot be found in the Substance Name Index, other reference material should be consulted before concluding the substance is not cited. If the CAS Registry Number is known, the Registry Number Index should be consulted directly.

Users of the Provisional DSL are cautioned that most trade names are not substance specific and, therefore, not suitable for DSL reporting purposes.

Deletions from the Core Domestic Substances List

A number of nominations received by Environment Canada in the initial phase of DSL building, and accepted for the Core DSL published in August 1989, have subsequently been determined to be invalid. In instances where this was the only valid nomination, the consequence has been deletion of the substance from the DSL. CAS Registry Numbers appearing on the Core DSL but not included in this listing are noted below:

25231-38-3

To further assist companies wishing to utilize the Provisional DSL, Environment Canada has arranged for its mounting on the on-line computer system of the Canadian Centre for Occupational Health and Safety (CCOHS). Using this system, a user may search the Provisional DSL on the basis of:

- CAS Registry Number
- Substance Name
- Molecular Formula

Subscribers to the CCOHS on-line network, CCINFOline will have access to this version of the Provisional DSL. Individuals requiring information on CCINFOline and access to it should contact:

Une substance peut être commercialisée sous une variété de noms. L'absence d'un nom, en particulier dans l'index des noms des substances, ne signifie pas que la substance chimique n'est pas identifiée sur la LIS provisoire; la substance peut être identifiée dans l'index sous un nom synonyme. Si le nom de la substance ne peut pas être retrouvé dans l'index, d'autres documents référentiels devraient être consultés avant de conclure que la substance n'est pas incluse. L'index des numéros de registre de CAS devrait être directement consulté si le numéro est connu.

Les usagers de la LIS provisoire sont avisés que la plupart des noms commerciaux ne sont pas spécifiques à une substance, et ainsi, ne sont pas acceptables aux fins de déclaration pour la LIS.

Radiations de la LIS de base

Quelques déclarations, reçues par Environnement Canada lors de la première phase, ont été conditionnellement acceptées pour la LIS de base. Toutefois, suivant une évaluation plus approfondie, Environnement Canada a déterminé que certaines d'entre elles n'étaient pas valables. Subséquemment, lorsque les substances n'ont été déclarées qu'une seule fois, elles ont été radiées de la LIS. Les numéros de registre de CAS qui figuraient sur la LIS de base mais qui n'apparaissent pas sur la LIS provisoire sont:

8005-02-5
25038-59-9
25231-38-3
51243-61-9
56709-13-8
57035-94-6
96726-33-9

Autres formats disponibles pour la Liste intérieure provisoire des substances.

Dans le but d'assister les compagnies désirant utiliser la Liste provisoire, Environnement Canada a procédé à l'installation de la Liste provisoire dans le système informatisé du Centre canadien d'hygiène et de sécurité au travail (CCHST). Grâce à ce système, un usager peut faire une recherche à travers la Liste provisoire en se servant:

- du numéro de registre de CAS
- du nom de la substance
- de la formule moléculaire

Les abonnés du service INFO-Centre du réseau CCHST auront accès à cette version de la Liste provisoire. Les personnes intéressées à obtenir plus d'information sur la disponibilité de la ligne CCINFO devront communiquer avec:

Environment Canada is also making the Provisional DSL available in a computer readable version. The format is a standard 5 1/4" diskette (MS-DOS operating system, ASCII file) containing all CAS Registry Numbers on the Provisional List. Substance names are not included. This diskette format should be useful to those who have collated their data on a personal computer. The diskettes are available from Environment Canada, on request, by contacting the Domestic Substances List Project at the address or telephone noted under **Information and Assistance**.

Environnement Canada rendra aussi disponible une version de la Liste provisoire en format magnétique. Ceci consiste en une disquette standard de 5 1/4" contenant un fichier codé en ASCII et utilisant le système d'opération MS-DOS. Cette disquette contient la liste de tous les numéros de registre de CAS inclus sur la Liste provisoire. Veuillez noter que les noms des substances ne sont pas inclus. Ce format devrait être utile à ceux ayant fait la collecte de leurs données à l'aide d'un ordinateur personnel. Les disquettes sont disponibles à Environnement Canada, sur demande, en communiquant avec le Projet de la Liste intérieure des substances, à l'adresse ou aux numéros de téléphone indiqués dans la section suivante.
